

BAHASA PEMROGRAMAN JAVA

Pertemuan V

STRUKTUR KONTROL PERULANGAN BERSARANG

Oleh
Achmad Arrosyidi

TUJUAN PEMBELAJARAN

Mahasiswa dapat mendemonstrasikan pembuatan struktur kontrol perulangan bersarang (nested loop).

Perulangan Bersarang / Nested Loop:

1. For Bersarang / Nested For
2. While Bersarang / Nested While
3. Do-While Bersarang / Nested Do-While
4. Kombinasi Perulangan Bersarang / Nested For, While, Do-While

1. NESTED FOR

- For bersarang adalah sebuah struktur kontrol perulangan For yang didalamnya terdapat struktur kontrol perulangan For

SYNTAX NESTED FOR

- Outer Loop

```
for (initialization; termination; increment) {
```

- Inner Loop

```
    for (initialization; termination; increment) {
```

```
        statement(s)
```

```
    }
```

```
    statement(s)
```

```
}
```

CONTOH NESTED FOR

```
1 //File: Program_3_9.java
2 import java.io.*;
3 public class Program_3_9 {
4     public static void main (String[] args) {
5         int qty=0;
6         BufferedReader tampung = new BufferedReader (new
7             InputStreamReader(System.in));
8         System.out.print("Masukkan angka untuk mencetak
9             segitiga bintang: ");
10
11         try {
12             qty = Integer.parseInt(tampung.readLine());
13             for(int i=1; i<=qty; i++){
14                 for(int j=1; j<=i; j++){
15                     System.out.print("*");
16                 }
17                 System.out.println("");
18             }
19         } catch (Exception e){
20             System.out.println("Masukan harus angka");
21         }
22     }
23 }
```

Console

Masukkan angka untuk mencetak segitiga bintang: 3

*

**

<<< Process finished (PID=1532). (Exit code 0)

===== READY =====

Console

Masukkan angka untuk mencetak segitiga bintang: 4

*

**

<<< Process finished (PID=7380). (Exit code 0)

===== READY =====

2. NESTED WHILE

- While bersarang adalah sebuah struktur kontrol perulangan While yang didalamnya terdapat struktur kontrol perulangan While

SYNTAX NESTED WHILE

- Outer Loop

- Inner Loop

```
while (expression) {
```

```
    statement(s)
```

```
        while (expression) {
```

```
            statement(s)
```

```
        }
```

```
    }
```

CONTOH NESTED WHILE

```
1 //File: Program_3_10.java
2 import java.io.*;
3 public class Program_3_10 {
4     public static void main (String[] args) {
5         int qty=0, counter1=1, counter2=1;
6         BufferedReader tampung = new BufferedReader (new
7             InputStreamReader(System.in));
8         System.out.print("Masukkan angka untuk mencetak
9             segitiga bintang: ");
10
11         try {
12             qty = Integer.parseInt(tampung.readLine());
13             while (counter1<qty+1){
14                 counter2=1;
15                 while (counter2 <= counter1) {
16                     System.out.print("*");
17                     counter2++;
18                 }
19                 counter1++;
20                 System.out.println("");
21             }
22         } catch (Exception e){
23             System.out.println("Masukan harus angka");
24         }
25     }
26 }
27 }
```

Console

3. NESTED DO-WHILE

- Do-While bersarang adalah sebuah struktur kontrol perulangan While yang didalamnya terdapat struktur kontrol perulangan Do-While

SYNTAX NESTED DO-WHILE

- Outer Loop

- Inner Loop

```
do {  
    statement(s)  
    do {  
        statement(s)  
    } while (expression);  
} while (expression);
```

CONTOH NESTED DO-WHILE

```
2 import java.io.*;
3 public class Program_3_11 {
4     public static void main (String[] args) {
5         int qty=0, counter1=1, counter2=1;
6         BufferedReader tampung = new BufferedReader (new
7             InputStreamReader(System.in));
8         System.out.print("Masukkan angka untuk mencetak
9             segitiga bintang: ");
10
11         try {
12             qty = Integer.parseInt(tampung.readLine());
13             do {
14                 counter2=1;
15                 do {
16                     System.out.print("*");
17                     counter2++;
18                 } while (counter2<=counter1);
19                 System.out.println();
20                 counter1++;
21             } while (counter1<qty+1);
22         } catch (Exception e){
23             System.out.println("Masukan harus angka");
24         }
25     }
26 }
```

Console

4. KOMBINASI NESTED FOR, WHILE, DO-WHILE

- Kombinasi Perulangan Bersarang / Nested For atau While atau Do-While bersarang adalah sebuah struktur kontrol perulangan For atau While atau Do-While yang didalamnya terdapat struktur kontrol perulangan For atau While atau Do-While.

4. a. KOMBINASI 1: FOR + WHILE

- Kombinasi Perulangan Bersarang / Nested For + While adalah sebuah struktur kontrol perulangan For yang didalamnya terdapat struktur kontrol perulangan While.

4. a. SYNTAX KOMBINASI 1: FOR + WHILE

- Outer Loop

- Inner Loop

```
for (initialization; termination; increment) {
```

```
    while (expression) {
```

```
        statement(s)
```

```
    }
```

```
    statement(s)
```

```
}
```

CONTOH KOMBINASI 1: FOR + WHILE

```
1 //Program NestedKombinasil.java - Program Latihan
  Perulangan bersarang kombinasi
2 public class NestedKombinasil {
3     public static void main (String[]arg) {
4         for (int i=1; i<=5; i++){
5             int j=1;
6             while (j<=i){
7                 System.out.print("*");
8                 j++;
9             }
10            System.out.println();
11        }
12    }
13 }
```

Console
